DR. KARLINSKY NEW LOOK NEW LIFE SURGICAL ARTS -ULTHERAPY TREATMENT @Aestheticsurg @NewLookNewLife

Published by [DIANE KRONSTAD](#) on December 27, 2014

Dr Karlinsky MD of the New Look New Life Surgical Arts Practices in Manhattan and Brooklyn performs the newest non-invasive treatment called Ultherapy to tighten and lift the skin. Ultherapy is a treatment best used for lifting brows, laxity of the jowls and neck and wrinkling of the de'colletage – area of body that is exposed when wearing low neckline garments.

Ultherapy is done using a high intensity / highly focused ultrasound treatment customized to the patient; in turn the body starts repairing itself as a result of the treatment by stimulating new collagen production with results of skin and muscle tighter, more elastic and uplifted in 3-6 months after only 1 procedure.

The Ultherapy procedure is perfect for patients who are showing signs of aging for whom surgery is not an option. Dr. Karlinsky is knowledgeable and experienced in performing this procedure and a dedicated, warm professional always ready to discuss the patients needs in a personal and caring manner ending with Ultherapy's gorgeous results.
